

# Setting up a vent fan on the Classic

Jumpers 6 and 8 set on pins 1+2 both rows

DC wires to vent fan  
Connected to Aux 1

Step 1. Set the 2 jumpers as shown in the picture above and wire the 12v fan to the Aux 1 terminals as shown using a proper fuse in the positive lead. White is Negative Red is Positive. The Classic Aux has the ability to supply 200ma of current. If more is required, you will need to use this signal to power the coil of a small relay.

Step 2. Push the Main Menu button once and scroll to Aux and push enter. Highlight the writing under Aux 1 and push the Right soft key (Upper Right button). Scroll up or down until Vent Fan (+) is highlighted and press enter. Now press the Right soft key again to set the voltage set point the fan turns on at. Adjust this voltage to your desired set point and press enter. Press the Main Menu button 2 times and highlight the words under Aux 1 and scroll up or down until you have Vent Fan (+) highlighted and press enter. You will notice there is a manual on and a manual off as well allowing you to control the fan manually as well if needed.
