Congratulations on the purchase of the MidNite Classic MPPT controller. This controller is one of the most powerful and adaptable in the industry. Designed to work with virtually any DC input source the Classic is already more feature packed than the competition. We are pleased to announce that there are yet more features for the Classic in the works. As these features become available, you will be able to upload them from our website.

Features in the works are:

1. Wind Learn mode
2. More aux 1 and 2 features
3. Voice and other audio

Please check our website for information regarding these features. They will be made available as they are finished.
